

# Bulbs & Illumination Recommendations

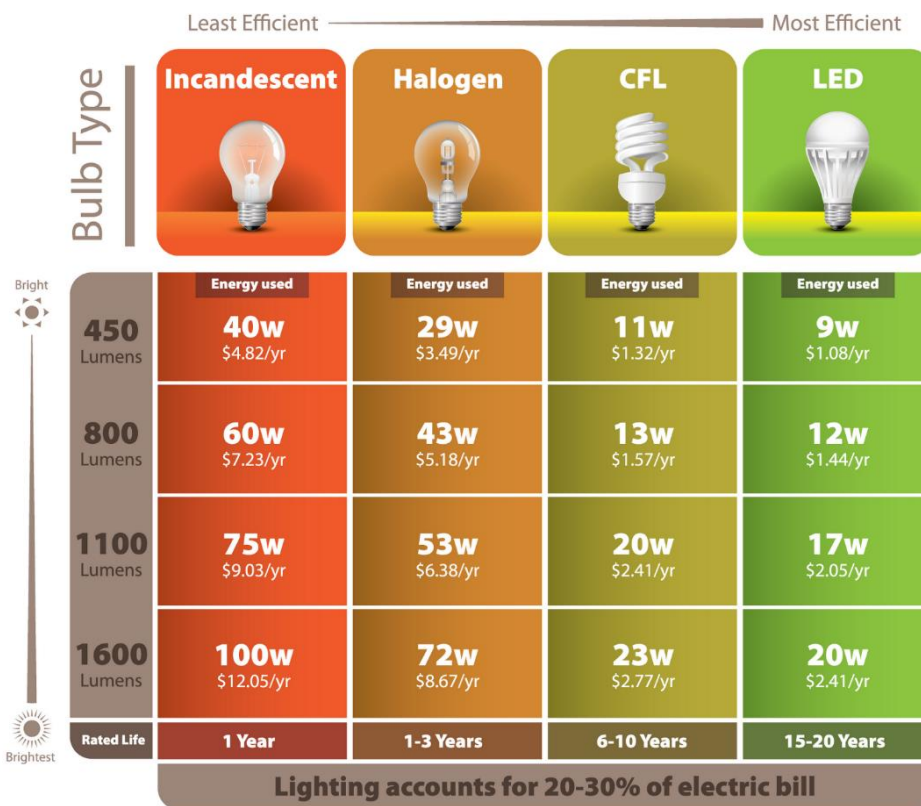

## Light bulb Recommendations and Links

\*Note that the brightness and the color of the bulb (warmth) will change the color of the KoZo papers and may look different than what is pictured on the KoZo lights.

## Selecting the right light bulb

Lumens recommendations:

How many lumens are needed for adequate brightness in the dining room? For LEDs, **450 lumens (\*6-9 watts) or 800 lumens (\*8-12 watts)** are great choices to put your food in the right light. While eating, the lighting can be slightly brighter. LED bulbs are highly recommended for efficiency and life cycle with dimmable the best choice. You may need to update your existing dimmable wall switches depending on age or consider smartphone dimmable bulbs (not shown).

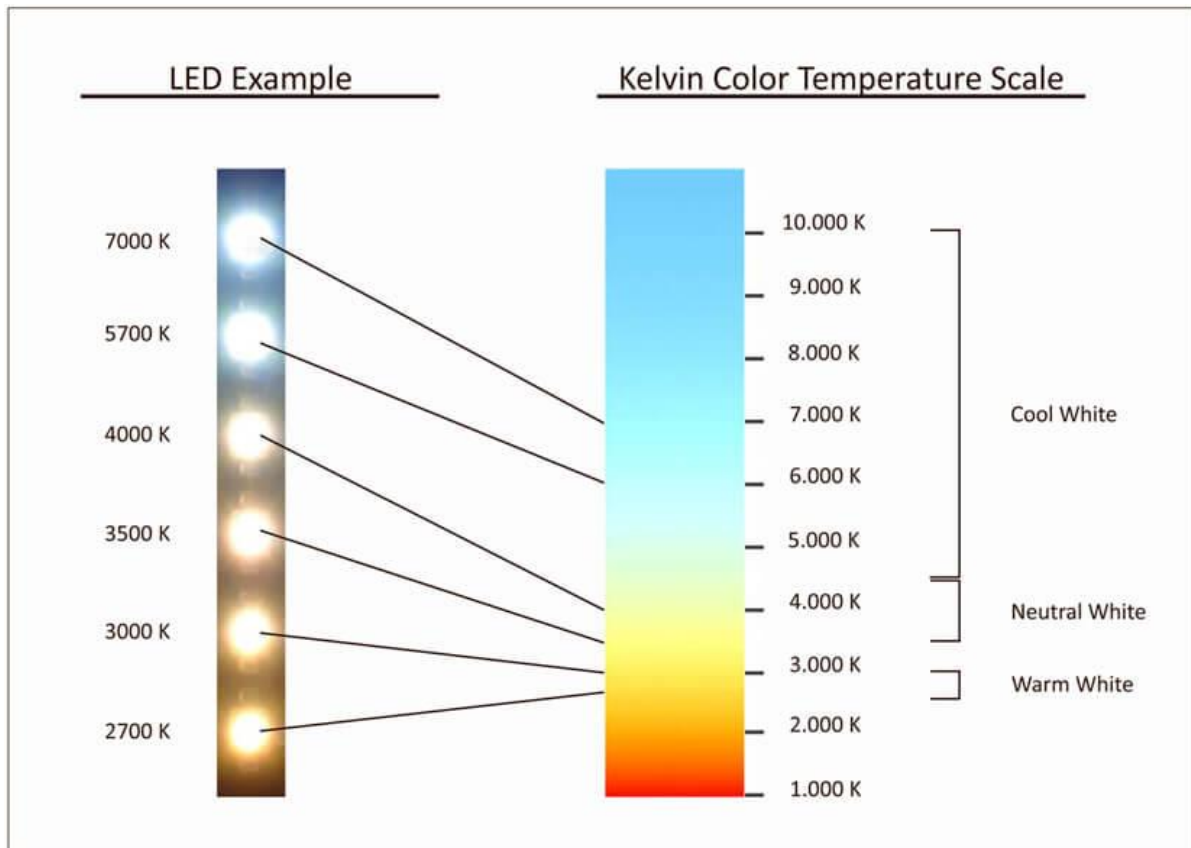

\*Manufacturers lumen output may vary per wattage

## Kelvin color temperature recommendations

Which color temperature is suitable for the dining table? Warm white to golden light up to **2,700 Kelvin** is ideal for a welcoming ambience. If the light is too bright, food can appear washed out. Once again purchase dimmable light bulbs so you can adjust accordingly.

## Light Bulb Resources

Below is a list of links for light LED bulbs. The bulbs need to fit an E26 socket base as all Fuller Design lights feature E26 bases unless otherwise noted. Bulbs come in various shapes and sizes so be sure to review all dimensions and visualize what they will look like with your light fixture. There are bulb manufacturers other than what are listed, and local hardware and general stores may be other resources to consider. The main suppliers listed below are [Grandbrass.com](http://Grandbrass.com) and [1000bulbs.com](http://1000bulbs.com). You may also consider smart dimmable bulb options (not shown). The prices are current and may change.
